

Mark Frisse, MD, MS, MBA

Mark Frisse is the Accenture Professor of Biomedical Informatics at the Vanderbilt University School of Medicine. His work focuses on the intersection between health care informatics, economics, policy, and health care transformation. His service includes responsibilities coordinating informatics activities among regional hospitals and fostering effective health information exchange. His research is directed toward the potential contribution to economically sustainable health care through more effective use of informatics and information technology.

In Tennessee, Dr. Frisse led the development and oversight of a six-year federal- and state-sponsored effort to create and operate a health information exchange for the greater Memphis area. More recently his focus has been on ONC-funded privacy research, clinically integrated networks and Vanderbilt's CMS Innovation Award focused on care coordination.

Previously, Dr. Frisse has held leadership positions at Washington University, Express Scripts, and the First Consulting Group. At Express Scripts, he was Chief Medical Officer and was responsible for their Practice Patterns Science division and the DrugDigest.org consumer Web site. In this capacity he helped found RxHub. At First Consulting, he led engagements in vendor selection, quality governance, physician information technology leadership development, and clinician governance.

Dr. Frisse is a board certified internist trained in hematology-oncology. He was trained at the University of Notre Dame (BS), Washington University (MD, MBA), and Stanford University (MSc, Medical Information Science).
